## EDUCATION

**Malla Reddy Engineering College**  
*B. tech CSE - CGPA - 7.8*

**2019 – 2023**  
*Hyderabad, India*

**Sri Gayatri Educational Institutions**  
*Intermediate - MPC - 87%*

**2017 – 2019**  
*Hyderabad, India*

## PROFESSIONAL EXPERIENCE

**Alpha-Numero (ANTS Global Systems Pvt Ltd) 📄**  
*Software Intern*

**01 2023 – 07 2024**  
*Hyderabad, India*

- Designed and managed backend services using the **FastAPI** framework, emphasizing the creation of high-performance **APIs** to support various data manipulation tasks and functional operations.
- Implemented complex **PostgreSQL** queries to efficiently handle large-scale data operations and designed scalable **Database models** to accommodate evolving project requirements, ensuring optimal performance.
- Performed extensive **Research and Development** to plan and implement innovative solutions tailored to meet specific project requirements, ensuring both current functionality and future scalability.

**Accelyzei Technologies Pvt. Ltd. 📄**  
*Associate Software Engineer*

**09 2023 – Present**  
*Hyderabad, India*

- Implemented highly functional **Python** backend APIs, ensuring seamless integration with existing systems and optimizing performance for diverse data operations, which enhanced overall application reliability.
- Leveraged advanced **Large Language Models** such as OpenAI, BERT, and LLaMA to significantly enhance data retrieval processes, resulting in extracting and processing information from various data sources.
- Executed advanced **Data Processing** techniques to address high-level data manipulation for enabling the development of robust and efficient models that will be used for requirements and operations.

## PROJECTS

**Next Word Predictor | LSTM - Deep Learning**

**03 2024**

- Implemented **Next Word Predictor** utilizing an **LSTM** based **Sequential Model** developed using **TensorFlow** library, designed to generate precise predictions by the data model has been trained.
- Preprocessed text data by implementing **tokenization** to convert text into a format suitable for model input and applied **padding** using **Keras** to ensure consistent input lengths, thereby improving the accuracy.
- Utilized the **categorical\_crossentropy** loss function and optimized the model's performance with the **Adam optimizer**, leading to enhanced reliability for the word prediction task in inference phase.

## TECHNICAL SKILLS

**Languages:** C, Python, Java, JavaScript, SQL, NoSQL

**Frameworks and Libraries:** fastapi, uvicorn, sqlalchemy, numpy, pandas, tensorflow, matplotlib

**Developer Tools:** PostgreSQL, MongoDB, ChromaDB, GitHub, Docker, EC2, S3 Bucket

**Integrated Development Environments:** Visual Studio Code, Jupyter Notebook, PyCharm

**Operating Systems:** Windows, Ubuntu, Elementary OS

**Coursework:** Operating System, Computer Networks, Database Management System, Object Oriented Programming, Data Structures and Algorithms, Machine Learning

## CERTIFICATES

**Business English Certificate**  
*Preliminary*

**03 2020**  
*Hyderabad*

**HackerRank Certificate**  
*Python*

**04 2022**  
*Hyderabad*
